

INNOVATIVE IGNITION PRODUCTS

Our experienced and talented engineering staff designs a full range of products for superior ignition of all types of burners. High performance and reliability are built into each of our innovative designs.

Innovation. Leadership. Experience. Design.

We're a leading designer and manufacturer of ignition systems and safety controls for manufacturers worldwide. Our expert design and engineering group can help you get new products to market quickly and cost-effectively. Customers choose Channel Products for integrity, leadership, customer service, and independent thought. We think big and move fast. It's this agility that provides Channel Products with the momentum to contribute to the success of our customers. For more information, contact us to arrange an introduction.

Reliability, Robustness, and a Variety of Options

These options are what sets Channel Products apart and allows you to differentiate yourself. We offer the widest selections of ignition systems in the industry, from piezo push buttons to reigniters. Channel is used to customizing solutions to improve your performance.

Our Product Offerings Include:

- Push button and rotary piezo ceramic igniters with one (1), two (2), and three (3) output choices.
- Battery operated ignition modules at 1.5 VDC and 9 VDC, offering one (1) to six (6) outputs.
- Line voltage ignition modules operating on 120 VAC with two (2), four (4), and six (6) outputs.
- Re-ignition systems sense flames and begin sparking to relight burners when a flame is no longer detected. These systems are ideal for commercial cooking, heaters, outdoor fire displays, and grill products.
 - 9 and 12 VDC
 - 24 and 120 VAC

Channel Products invented the push-button piezoelectric igniter. We applied it to a gas grill when everyone else was still using a match. We still make it. We make it with different spark outputs, rotary knobs, ratcheting rotary knobs, with embedded wires, with a ground wire, with a ground tab, with different color buttons...you get the picture. In the past 30 years, we've expanded our offering to include the largest assortment of re-lighters and battery-powered spark igniters in the world. Our igniters are CSA certified allowing for use in both North American and CE approved appliances.
